

Figure 1

Differences in the Means of the Initial SChE Levels in the Four Study Groups

Figure 2

Correlation of VAS With SCHe:

As the VAS Rises, the Percent of Cases with Preoperative SCHe Levels Above 1272 Tend to Rise

Figure 3A

Figure 3B

Preoperative and 30 Minutes Post-anesthetic Induction SCHE Levels in CSP Patients and Surgical Controls

Preoperative to 30 minutes Post-Induction SCHe Levels in 55 CSP Patients, 11 Surgical Controls, and in 13 CSP Patients Sampled 1 Day PO

Figure 3C

Means of the Preoperative and 30 Minutes Post-induction SCHe Levels of Seven CSP Patients in which the Level Rose > 1SD

The Volatility of Case 25 is Illustrated

Figure 3D

Figure 4

Mean SCHe Levels of Nine Disabled Patients and Eight CSP Patients

Figure 5

Preoperative to 30 Minutes Post-Induction ScHe Levels in 54 CSP Patients

Preoperative to 30 minutes Post-induction SCHE Levels in 34 CSP Patients with Preoperative Levels > 1272

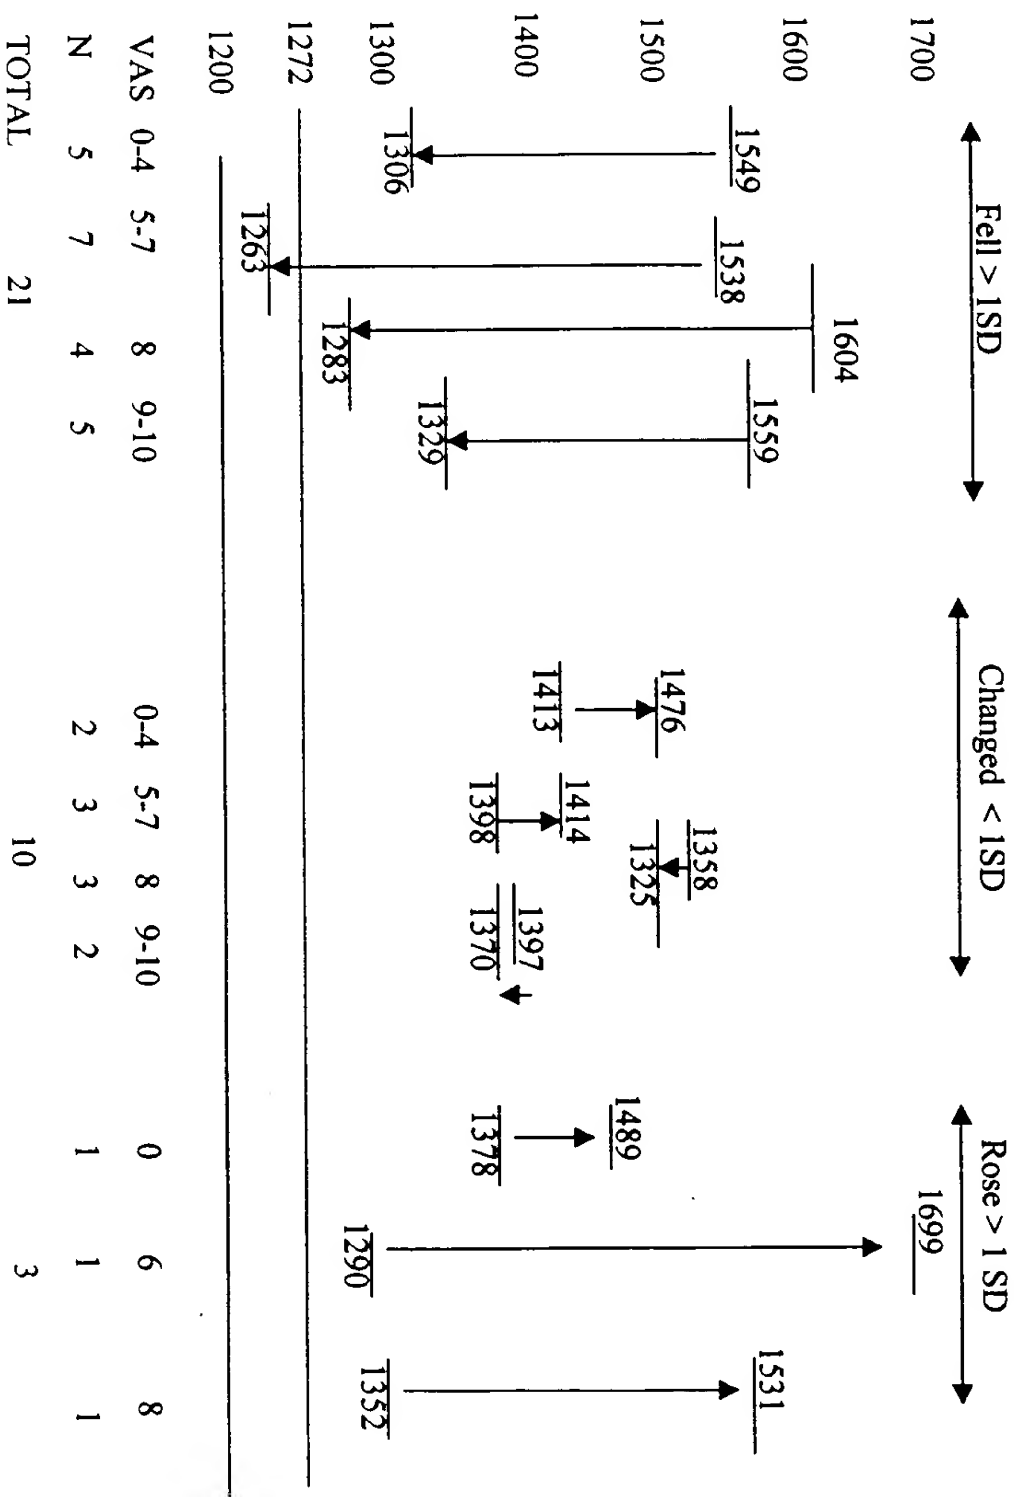

Figure 6

Figure 7

Preoperative to 30 Minutes Post-Induction SCHe Levels in 20 CSP Patients with Preoperative Levels < 1272 *

Figure 8

Pre to Intraoperative SCHe Levels in 11 Instrumented CSP Cases that were Monitored

R=Removal, I=Insertion of HW
